

Python Lab

Program list-1

1. Write a Python program to display future leap years from current year to a final year entered by user.
2. Write a Python program to generate positive list of numbers from a given list of integers
3. Write a Python program to form a list of vowels selected from a given word.
4. Read a sentence from the user and do the following:
 - a) Count the number of words.
 - b) Search for a particular word.
5. Write a Python program to prompt the user for a list of integers. For all values greater than 100, store 'over' instead.
6. Write a Python program to store a list of first names. Count the occurrences of 'a' within the list.
7. Write a menu driven program to enter 2 lists of integers. Check
 - (a) whether lists are of same length
 - (b) whether lists sums to same value
 - (c) whether any value occur in both
8. Write a Python program to get a string from an input string where all occurrences of first character replaced with '\$', except first character. [eg: onion -> oni\$n]
9. Create a function to read a number (minimum 4 digits) from the user and find the reverse of the number using loop in another function and display both number and reverse of the number.
10. Create a dictionary to represent details of a student (name, roll number, register number, department, semester). Add new element total mark. Based on total mark find grade of student and add to dictionary. (total mark: 90>= A, 82>= B, 75>= C, 60>= D, 50>= P). Delete roll number.
